

LeanData & Automatic Notification Integrations

Accelerate lead response time with instant and automatic notifications

Challenge

Revenue teams are managing many tasks on a daily basis, but can easily overlook new leads, accounts, and other assignments that require timely followup. This not only disrupts lead response time — aka, your speed to lead — but also negatively impacts SLA agreements, the buyer experience, and conversion rates. While many buyer signals indicate when B2B sellers should engage prospects and accounts, it is critical to immediately surface those buyer signals when they are ready to be actioned as part of revenue orchestration.

Solution

LeanData's integrations with instant notification solutions, such as Slack and Microsoft teams, automate notifications that instantly alert team members when a record is assigned to them. Additionally, notifications can be customized with all the relevant information necessary to guide your reps' next best action. The result is greater SLA compliance, an improved buying experience, increased conversion, and a faster time-to-revenue.

How It Works

FlowBuilder, LeanData's visual drag-and-drop interface for **Routing**, makes it easy to specify who and when someone should be notified via Slack or Microsoft Teams, as well as what message should be delivered at any point during the routing process.
